# JUNE 2017 HIGHLIGHTS

## Mythbusters: The Search

**From Friday June 9 at 19:30/22:00**

The search is on for a whole new team of myth-busting, experimenting build masters to tackle the truth and the science behind urban myths and Hollywood tricks. In this reality series hosted by Kyle Hill, 10 elite builders will battle it out for their chance to continue the Mythbusters legacy and become the programme's new hosts. Each episode features two myths that will be put to the test – one team-based and one individual – in elimination rounds designed to test the builders' skill, scientific knowledge and creativity. With brand new myths to bust, as well as some favourite builds from the past, the competition and the science will be fierce!

## Asteroid Day (Stunt)

**From Monday 5 June to Friday 30 June between 20:20 and 22:00**

It's time to blast into space with a special series of programmes this month to mark the annual Asteroid Day. Man Vs Asteroid takes an intimate look at the Asteroid Day Foundation co-founded by legendary Queen guitarist, Dr Brian May. Using archive footage and expert interviews, the programme reveals what would happen if a large asteroid hit Earth, the measures being taken to protect mankind and what should be done now. Mission Asteroid recounts NASA's best and brightest and their efforts to conquer the asteroids that could destroy mankind... but might also be the key to humanity's survival. In drama 51 Degrees North, a talented German filmmaker grapples with the pressures of an impoverished profession and a dissolving relationship – and then discovers that the earth is under threat. Combining the latest science, geology and palaeontology, scientists give their reasons for the extinction of dinosaurs in Last Days Of The Dinosaur. Will one of the planet's greatest mysteries finally be solved?
